PRODUCT FEATURE

Sage 300 Construction and Real Estate vs. Sage Intacct for Construction

Sage Intacct for Construction and Sage 300 Construction and Real Estate are both software solutions designed to meet the accounting and financial management needs of companies in the construction industry. However, there are some key differences between the two.

Sage Intacct for Construction is a cloud-based accounting solution that provides real-time financial insights and automation capabilities for construction companies. It offers a wide range of features, including project accounting, time and expense tracking, accounts payable and receivable, financial reporting, and more. On the other hand, Sage 300 Construction and Real Estate is an on-premises accounting solution that offers a comprehensive set of features for managing the finances of construction companies. It includes features such as project management, job costing, accounts payable and receivable, payroll, inventory management, and more.

We've compiled a list of the key feature differences between the two software platforms.
